Suche: AppleHDA (v274.7) gepacht für RealtecALC1150 - GA-Z97X-UD3H

Beitrag von „al6042“ vom 27. März 2016, 12:46

Hi Crusher...
I would like to use the AppleALC for my ALC898.
I attached the HDEF inject from my current DSDT, with which the patched AppleHDA from the Multibeast 7.5 (Yosemite 10.10.5) runs fine.

Since I use Ozmosis, which doesn't have a spot to Inject the Audio layout-id again, shouldn't it suffice to have the inject in the DSDT?
