> mit ist aber auch nicht besser, console läuft durch wird schwarz(blendet sich aus), nix passiert

Ich hoffe dir fällt es selber auf.

Navi 10 Series

Highest Supported OS: Current/Monterey (12)

- Initial Supported OS: Catalina (10.15.1)

Currently, as of 10.15.1, Apple has finally added RDNA and Navi support!

Supported Cards:

- RX 5500
- RX 5500 XT
- RX 5600
- RX 5600 XT
- RX 5700
- RX 5700 XT
- RX 5700 XT 50th Anniversary Edition

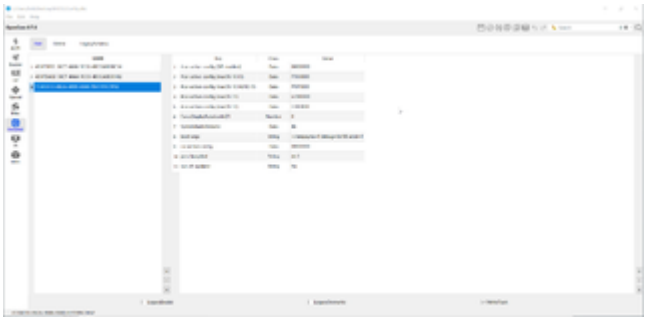
Radeon Pro:

- Radeon Pro W5500
- Radeon Pro W5700

Note: Most Navi cards currently require the boot argument `agdpmod=pikera` to get proper display out.

Needed kexts:

- LiluAndrit2
- WhatevenGreenLilandrit7

Important note for MSI Navi users:


- Catalina (10.15) installers and under currently have a VBIOS bug which crashes installers if an MSI Navi card is present. This can be resolved by injecting `ATY,Rom#` in your GPU's DeviceProperties with any value. See here for more details: Installer not working with 5700XT #3012
- MSI's Polaris and Vega line are not affected by this bug.
