

See Change Log for Update

MacOS Sierra HD

This is a app bundle create with Platypus-5.1

Very simple: No Library hidden and multiple files and folders. No files or images you have not requested. OS X will be Deploy and only Clover will be added if you choose to install.

Its not of thousand Magic Codes; its a simple shell Script that you can see.

Find /Contents/Resources/MacOS-HD.sh

*** This will only Deploy MacOS Sierra on your selected Volume ***

Perfect Vanilla Deployment

Based on the old InstaDMG [InstaDMG](#)

InstaDMG was finalized by MagerValp with [AutoDMG](#)
Same methods describe here, the only difference is the OS Installer deploy

on the Disk image and not on the Disk (SSD) You need ASR Restore to Restore the image on the SSD

<http://www.theinstru...es-with-autodmg>

Benefits of Deploy by Mac Admin
[building-mac-disk-images-using-autodmg/](#)

Deploying methods is create by Apple Developer
I am not the inventor of this method that has been demonstrated

I have just a good idee to make this thing for Hackintosh.
Since a few years already; I have three OS are installed in this way and believe me

I've never had problems with anything.

Take care of your Mac ! Do not install stupid Applications
that modify the Base System
and coming install multiple files that will ultimately affect
your machine.

* This is my third release of the Installer HD *

El Capitan HD here <http://www.insanelym...-el-capitan-hd/>

Yosemite HD here <http://www.insanelym...04256-new-way-t>

***** Working inside MacOS 10.12 ! Don't try MacOS
Sierra HD inside El Capitan! *****

Works with Developer Beta and Public Beta

And Working at the Final Release 😊

Run this command for allowing software from anywhere

```
sudo spctl --assess --master-disable
```

***** Other OS ? Working also for 10.9, 10.10, 10.11 *****

My Exemple in the second Video is Mavericks 10.9.5 ; so
I need to used this on Mavericks and so on

PS: Follow video no -2- for Other OS

Instructions

This will Deploy MacOS Sierra on your selected Volume.
You need Installer MacOS Sierra.app from Mac App Store
on your Mac.

You need empty SSD OR HD before using this program!

After having followed all the steps successful
Simply put the SSD into a compatible PC and doing are
Hackintosh.

1. Download MacOS Sierra HD.app

2. Open `MacOS Sierra HD.app`
(Follow every steps`).

How Does MacOS Sierra HD Work?

Its a shell script called MacOS-HD.sh (See the scripts`).

Follow every steps in the Video

The Video is produce in my PC Lenovo ThinkCentre

[* New Video *](#)

PS : Sorry little glitch with my Video recorder in MacOS
Sierra Public Beta 2 😊

[MacOS Sierra HD 2.2](#)

You can also create MacOS HD for 10.9 / 10.10 /
10.11

Simply select the good Install OS X.app
(My Exemple in this Video is Mavericks 10.9.5 ; so I
need to used this on Mavericks and so on)

Follow Video no-2- for other OS

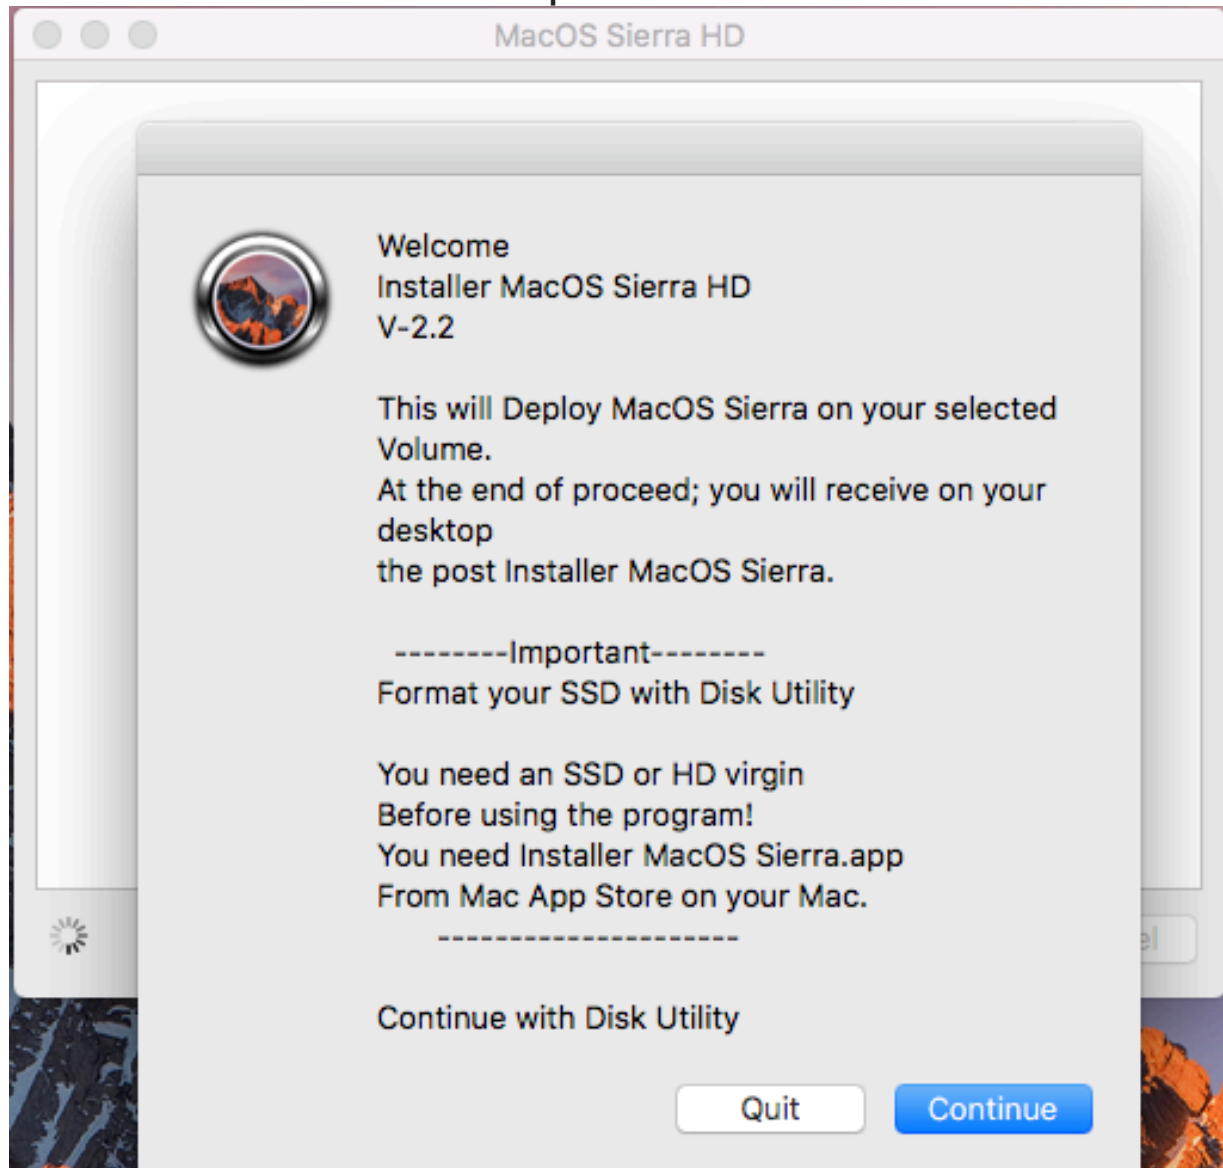

[* Video no -2- *](#)

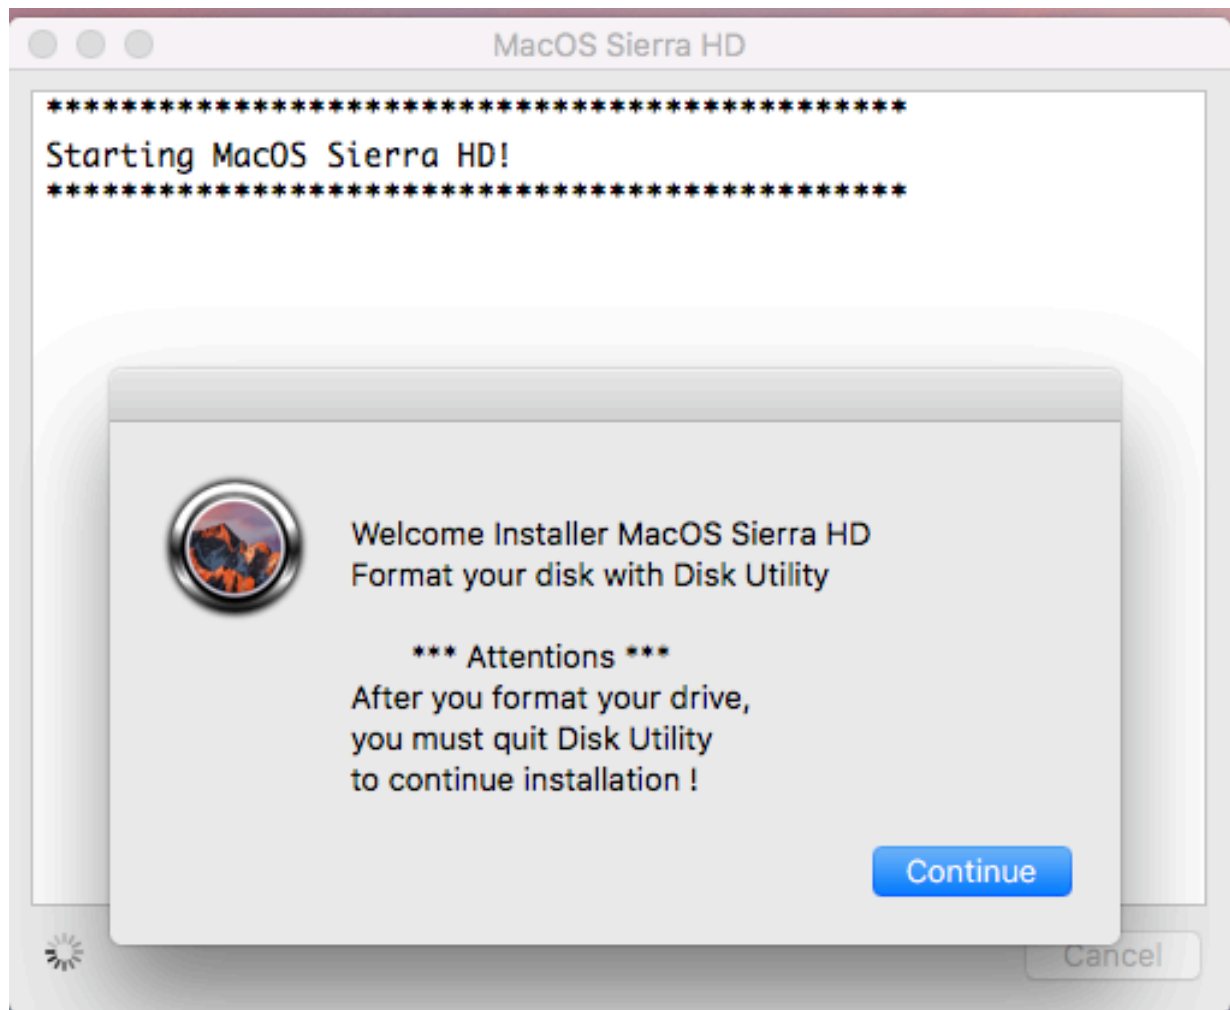

MacOS Sierra HD 2.2 Other OS

----- Attentions -----

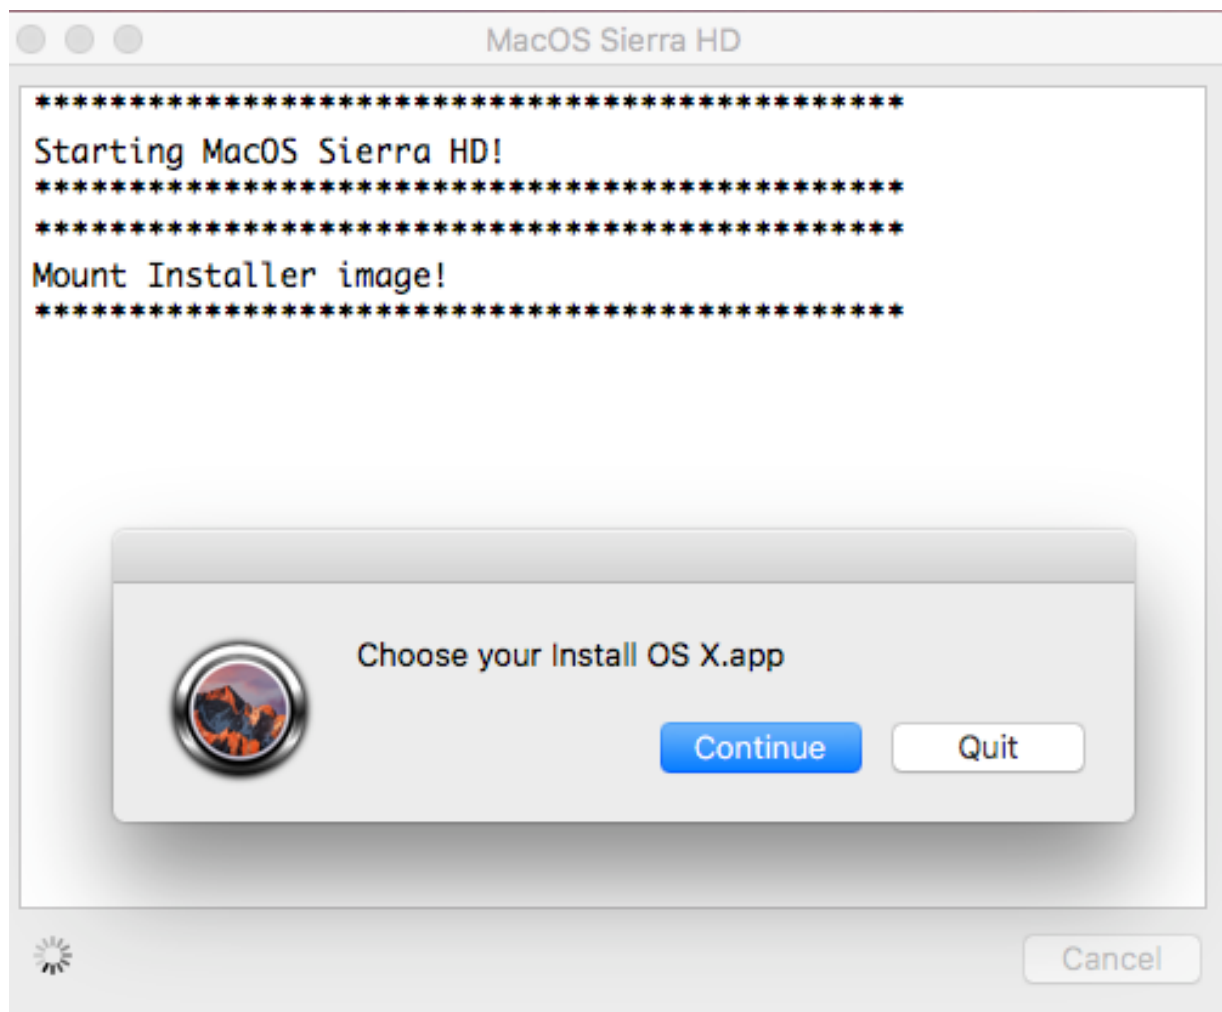

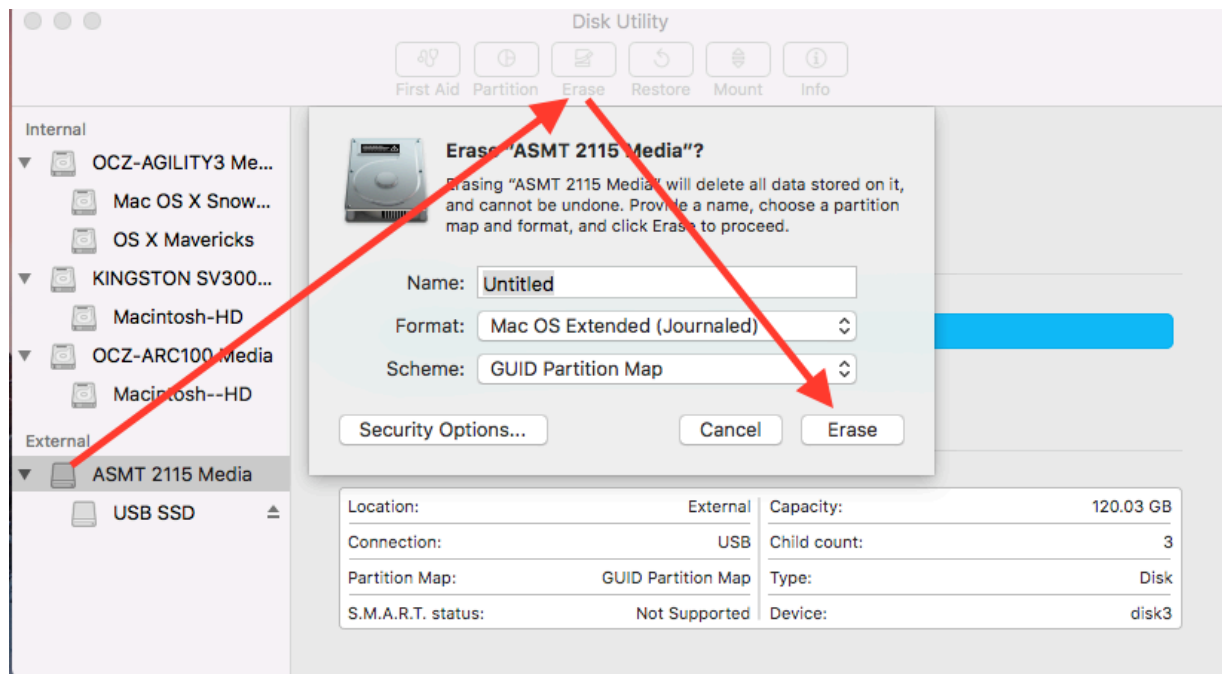

Follow every steps in the Video!

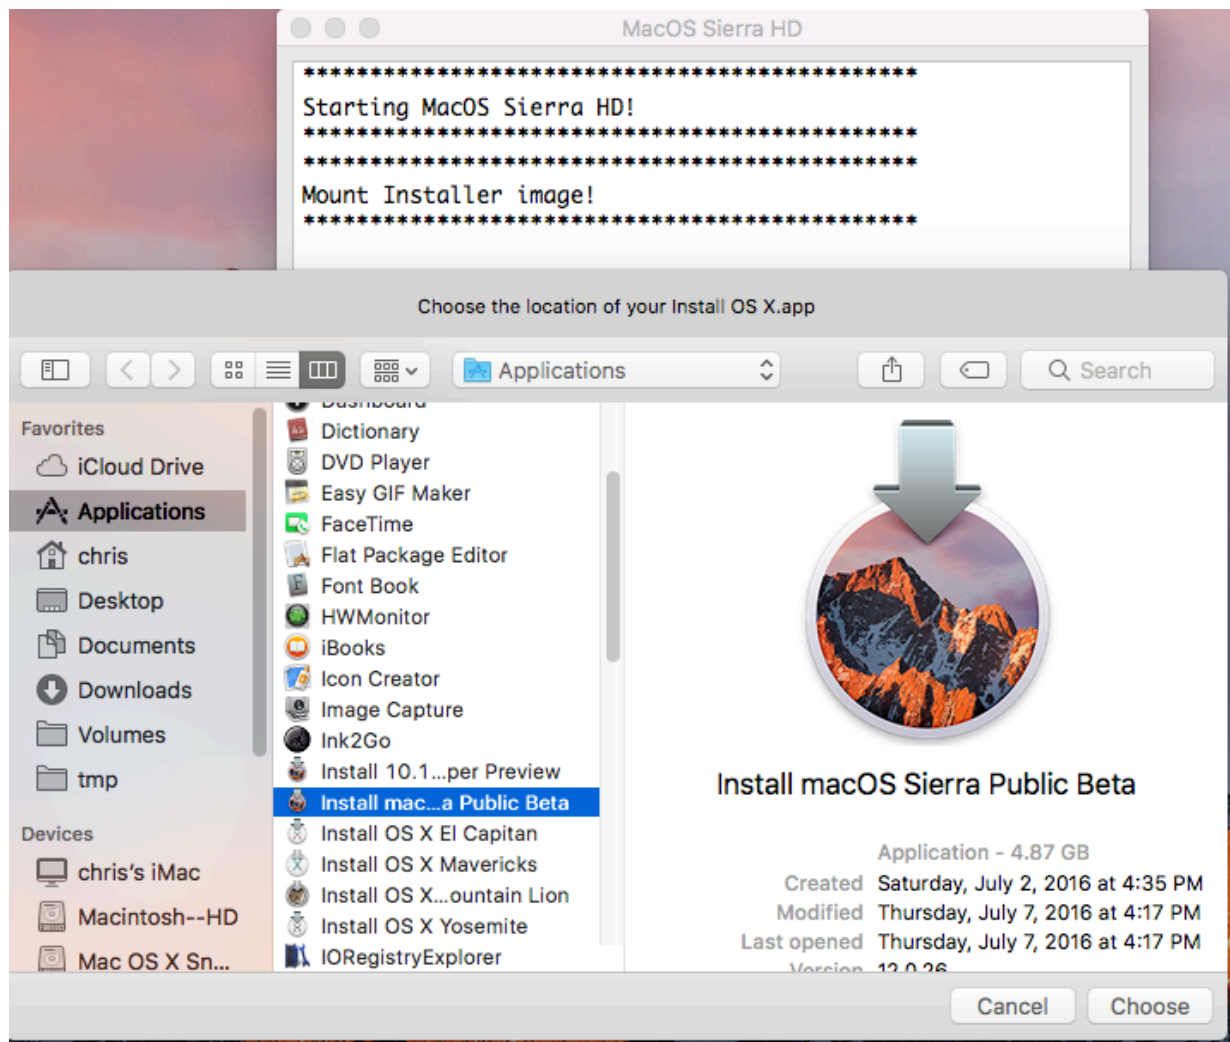

*** All steps in Picture ***

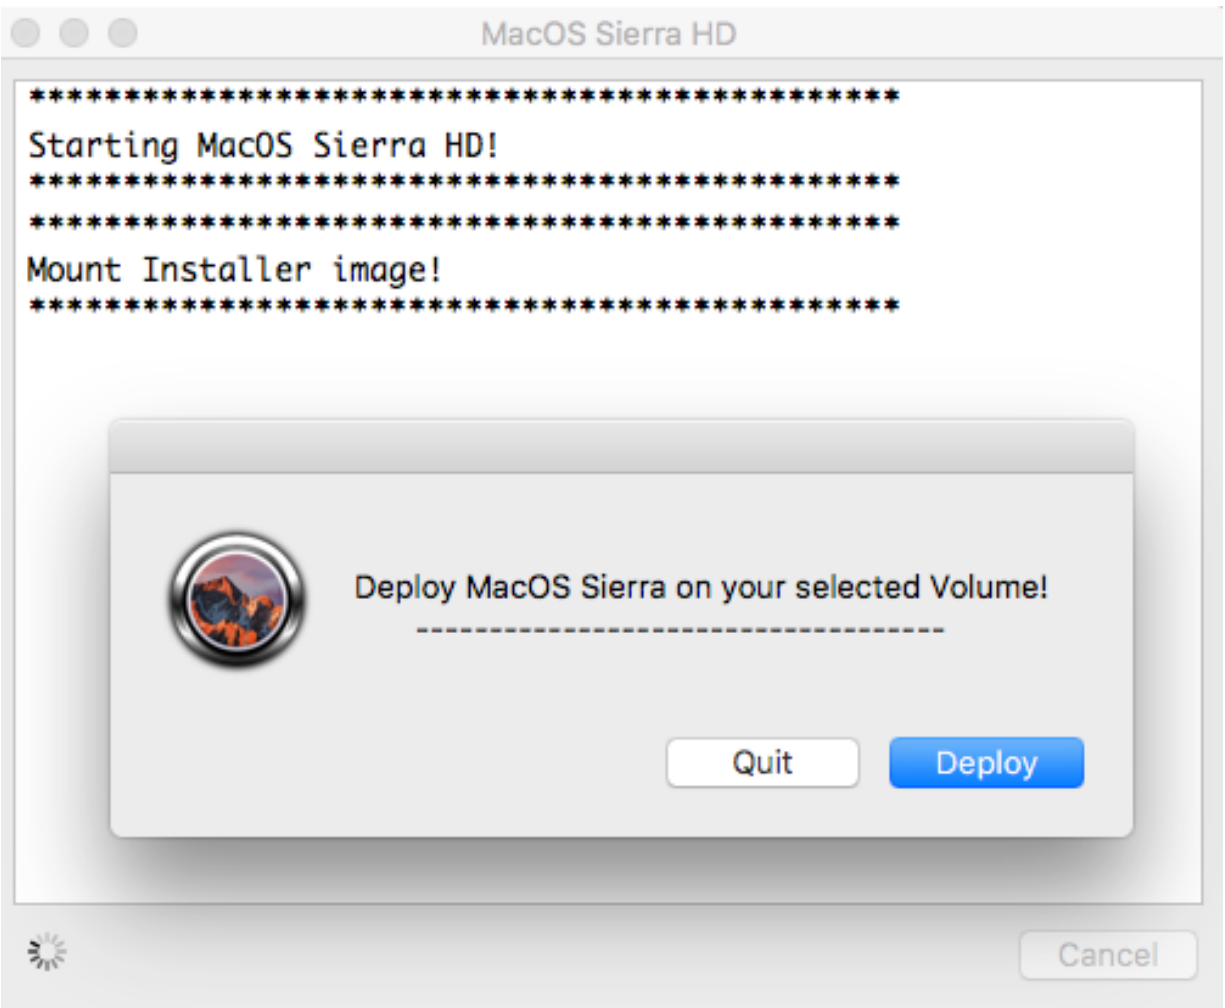

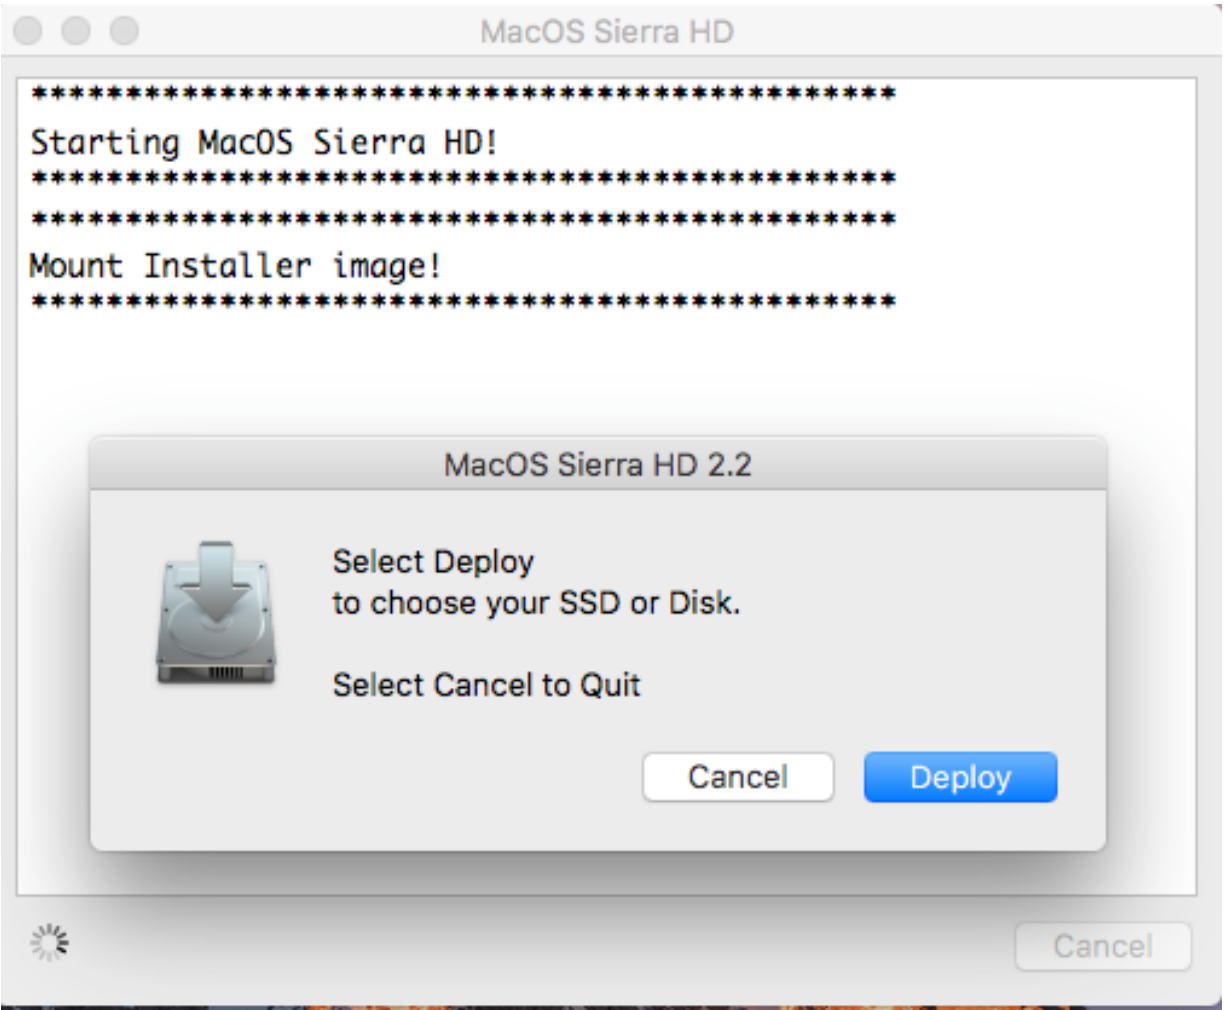

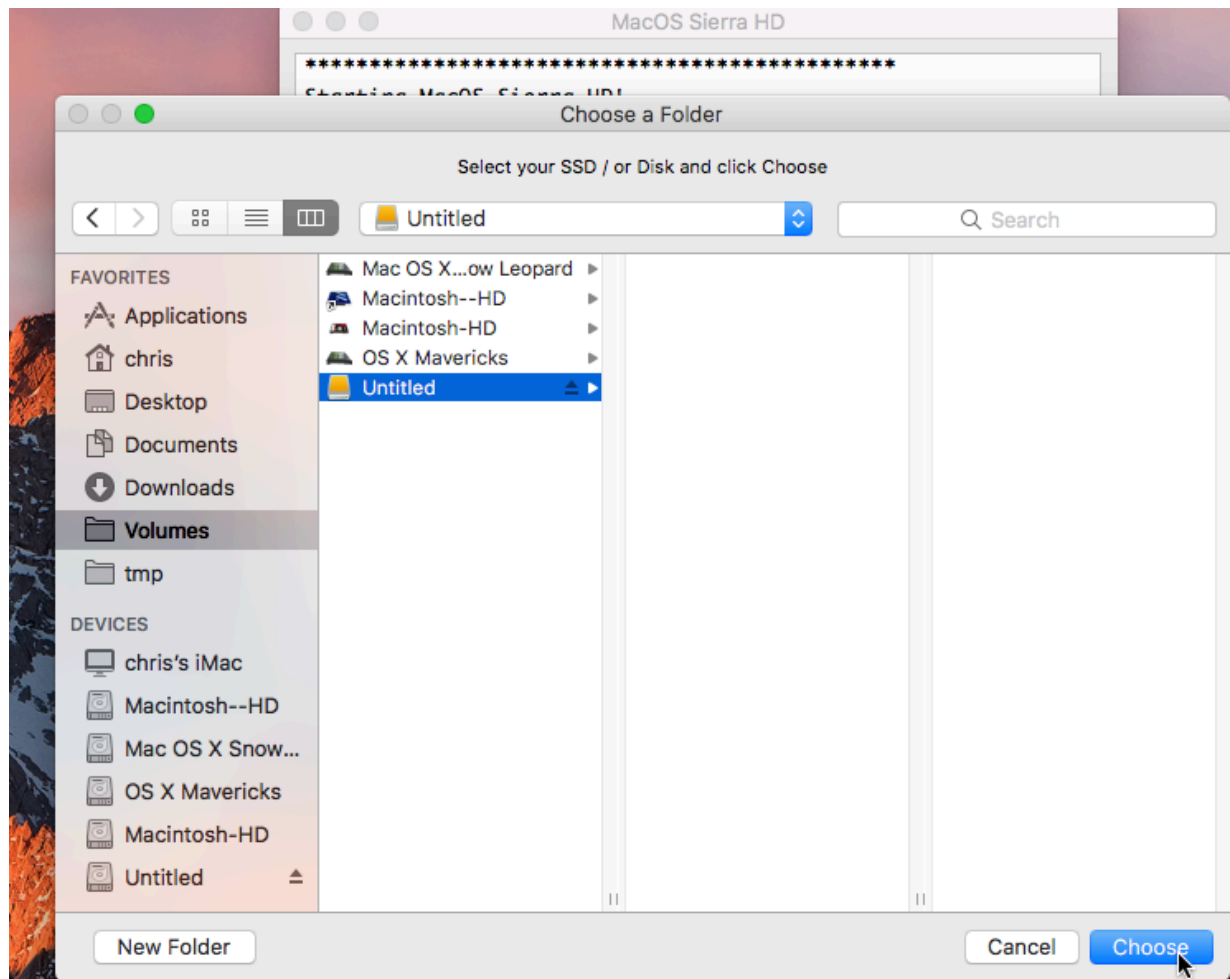

After erasing the SSD you also must quit Disk Utility to
continue installation

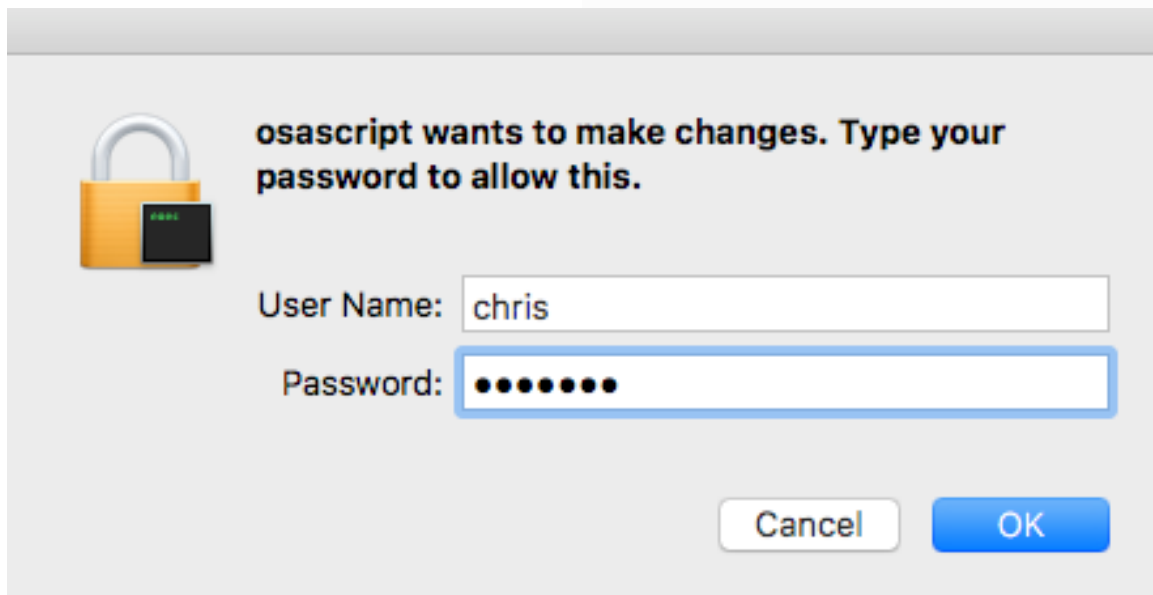

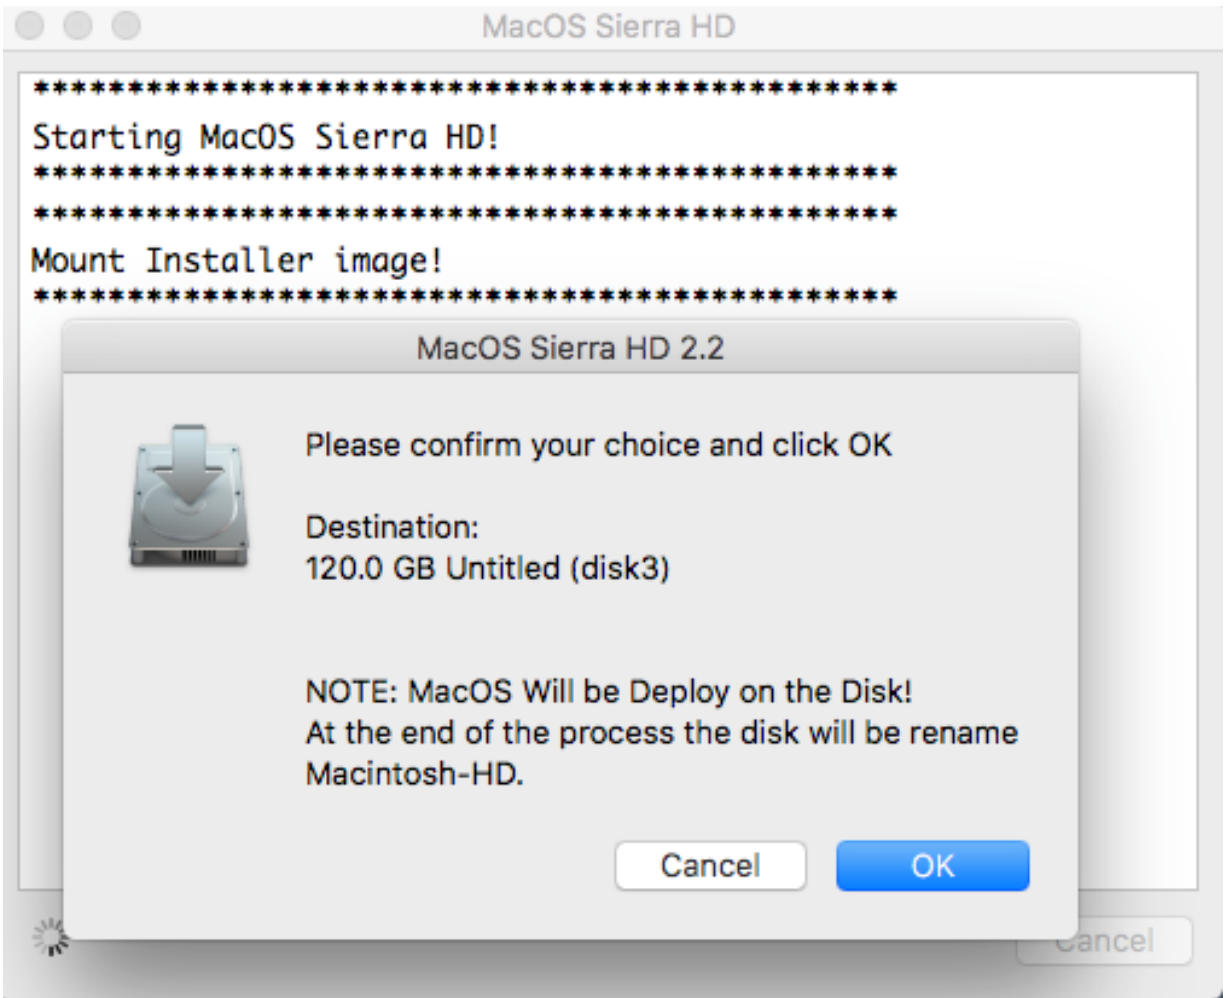

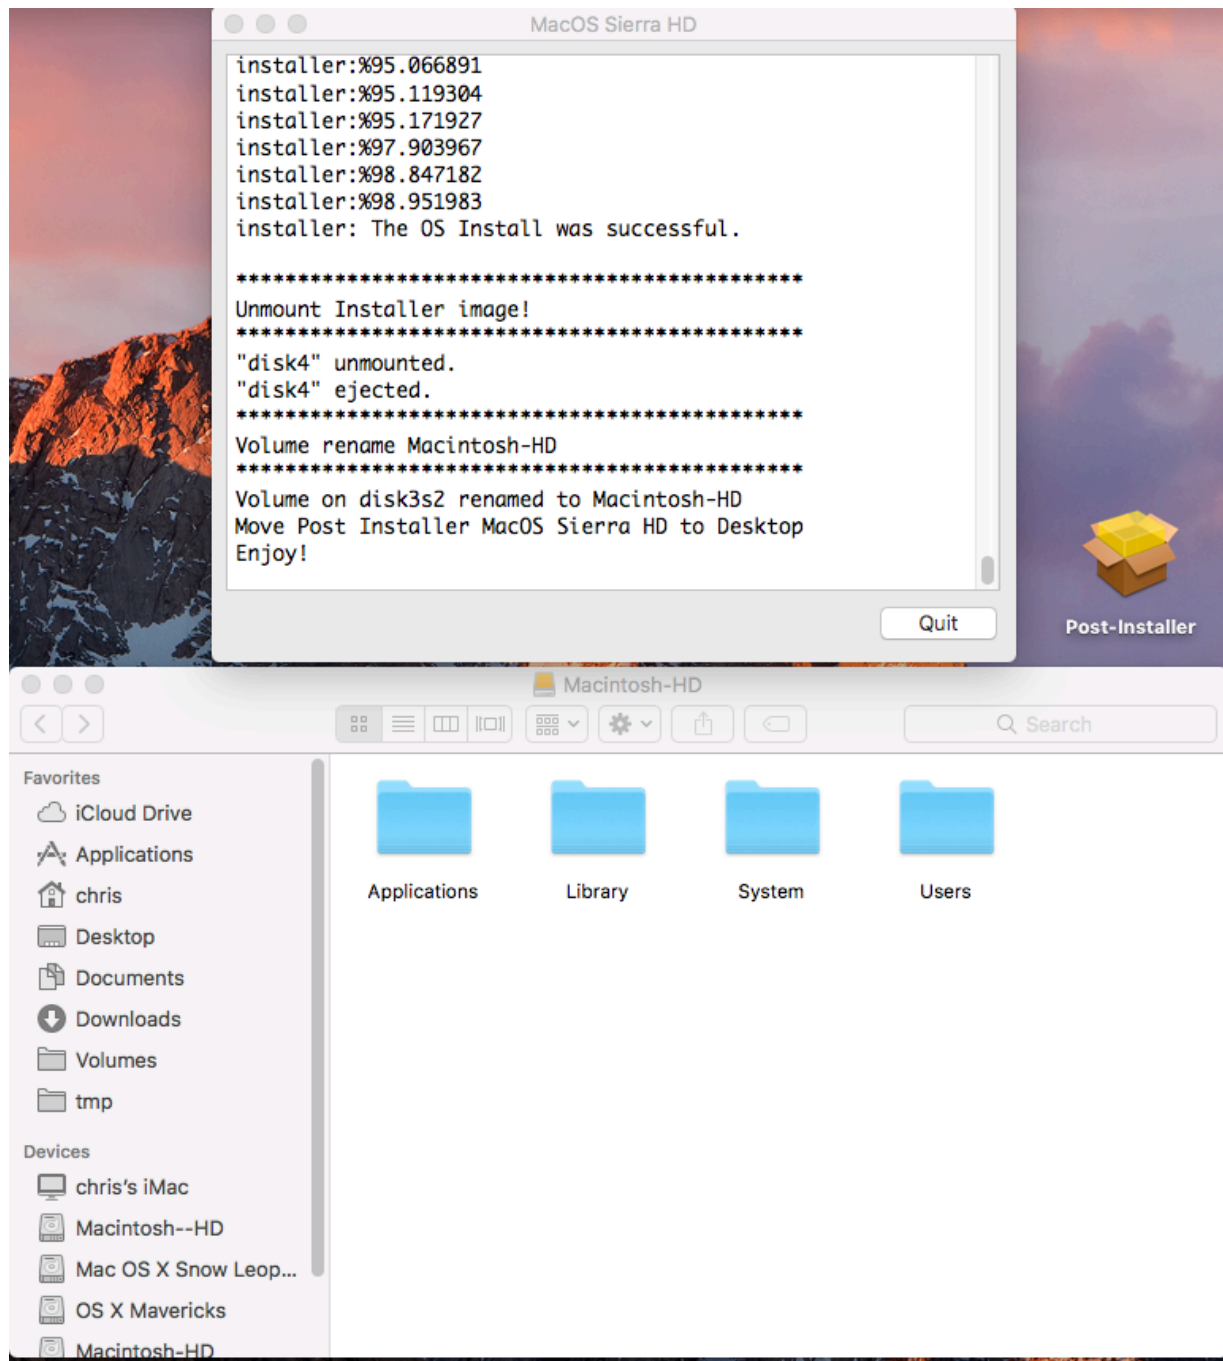

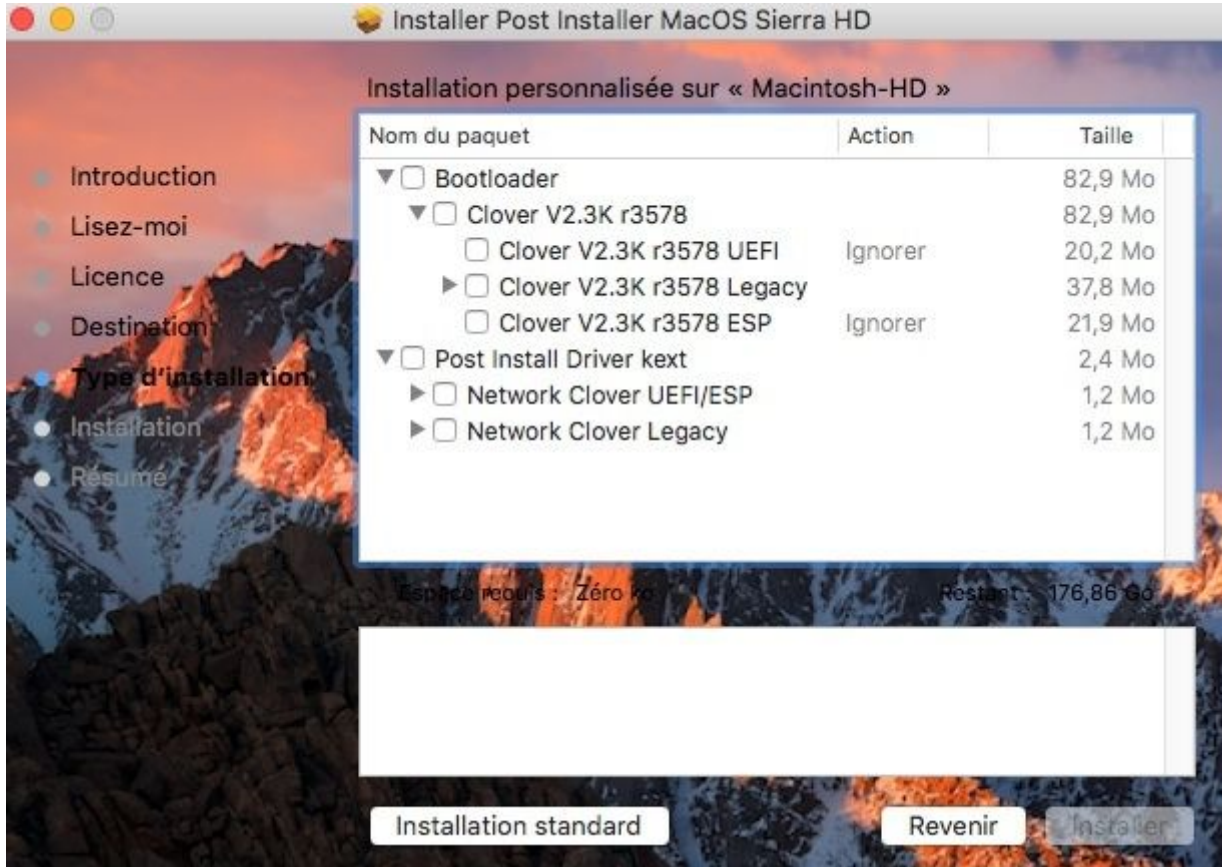

PS: You can used External SSD or HD

The post Installer contained only Clover and network kext
for Clover Legacy or UEFI
injected by Clover

PS: If you have existing Installation MacOS Sierra with Clover
not need to used the Post Installer.

Thanks to Clover Team
