Fire wire port lost after multiple reboot

Beitrag von „OMWO" vom 28. Januar 2012, 11:08

>He restored an older Backup of his machine and got his FireWire back.
>Wich Version of osx was installed when you did the Backup?

Exactly the same like the one I have been using yesterday night for the IOFireWire Kext re-installation; OSX10.6.8

>Get the FireWire Kexts from there and put them in your actual System.

Well, do you think it would help considering I did a re-install of these Kext from the original OSX CD?

>Install them with kextwizard and repair permissions.

I wait until I get your/some moor answer...
A guy on another forum explained that the upgrade Apple send via the network brings some IRQ conflict...
And another one, proposed to use the combo as upgrade...Your "thought" about that solution?
Is there a diff function which would help to compare the IOFireWire configuration Files
