Erledigt Yosemite Installation Mit Diskmaker X schlägt fehl

Beitrag von „taucher71“ vom 20. Oktober 2014, 22:54

So
Installation vollendet aber nur so halb erfolgreich.

Übrigens ja ich habe Yosemite so wie hier beschrieben auf den stick installiert ansonsten wäre die Installation ja gar nicht gelungen.

So nun habe ich aber entweder nen schlechten Xeon erwischt oder der Unterschied zwischen dem alten i5 4670K ist rein rendertechnisch nicht so gravierend.
Ergo habe 230€ für den Xeon umsonst ausgegeben.Muss ich irgendwo noch irgendwas aktivieren oder warum habe ich in Cinebench r15 fast die gleiche Punktzahl 690cb zu 685cb zum i5.
ich hoffe ihr könnt mir da noch helfen.
Geekbench sagt mir dieses.
