Das ist nur der Hinweis Text des Paketes:

Im Original liest sich das wie folgt:

To uninstall this driver and restore your original Mac OS X v10.7.3 driver, follow the steps below:

STEP 1: During the installation process, a backup archive of your current drivers will be created. If for any reason you need to uninstall the 270.00.00f01 driver, the “NVIDIA Driver Restore.mpkg” is located in /Library/Application Support/NVIDIA.

IMPORTANT: Do not move this package from its default location. Doing so will invalidate the uninstall/restore process. Also, this process is only valid with Mac OS X v10.7.3. Installing any newer version of the OS over this driver will also invalidate the uninstall/restore process.

STEP 2: After locating the NVIDIA Driver Restore.mpkg archive, double-click on the package. You will be guided through the driver restoration process. Click Continue after you read the Welcome screen.

STEP 3: Click Install on the Standard Installer screen. You will be required to enter an Administrator password to continue.

STEP 4: Click Continue Installation on the Warning screen: The Warning screen lets you know that you will need to restart your system once the installation process is complete.

STEP 5: Click Restart on the Installation Completed Successfully screen.
