Yosemite Installation auf Z97M-D3H

Beitrag von „Griven“ vom 7. April 2015, 20:38

Please provide a more detailed description of the kernel panic or even better a screenshot or log file and let us also know if you installed any third party extensions eg. from Multibeast before you started the update process. The more we know about your actual setup the easier it would be to figure out what went wrong.

thanks in advance 😊
