Ozmosis für GA-B75TN möglich ?

Beitrag von „hajjikoko“ vom 1. Mai 2015, 16:46

Hi 😊

A) Ozmosis Bios cannot boot untouched OS Installer: kernel panic. It can boot previously installed drive but only with NUIICPUPowermgmnt.kext. If this kext is removed I get a kernel panic. Errors show problem with power management... I'm guessing BIOS was not patched for Native CPU Power mngment.

b) Yes I used the Bios from above. (Can I unlock CPU MSR/ UEFI Patch the Ozmosis bios above?, I think this may solve the power management panic.)

Your help is greatly appreciated.
