Ozmosis für GA-B75TN möglich ?

Beitrag von „hajjikoko“ vom 5. Mai 2015, 23:42

Thanks for the quick response. Yes I know most Gigabyte boards have unlocked MSR but these tiny 'TN' suffix boards have their AMI bios setup more like a laptop. I Flashed the PMpatched Ozm Bios and it works great! Thanks for the help guys! (Now to figure out the terminal commands to change SMBios to Macmini 6,2 ; still learning about Ozm config).
