Windows auf eine zweite SSD

Beitrag von „apatchenpub“ vom 15. Juli 2015, 00:29

Habe mal ein wenig Tante google bemüht und auch etwas auf der englischen Homepage von PD gefunden:

Zitat

Cause

Parallels Desktop currently supports OpenGL 2.1 only (not higher).

Resolution

Parallels virtual machine (Windows, Linux and OS X) uses OpenGL version that Host OS have on board, but not higher than 2.1

In case you can't use an app that should work fine with OpenGL 2.1, most likely that OS X on your Mac is outdated.

It can be easily checked by OpenGL Extensions Viewer

NOTE: We are currently working on providing support for OpenGL 3.

We suggest that you subscribe to this KB so that you will be notified of any updates we have regarding OpenGL support in Parallels Desktop.
