How to enable IGFX? (Mavericks)

Beitrag von „neoyoli“ vom 27. Juli 2015, 02:20

Hi guys,

In BIOS, when I set "Init Display First" to Auto, and "Internal Graphics" to Enabled, the IGFX gives black screen, and GTX 760 gives the following error at boot:

When I set "Init Display First" to IGFX, and "Internal Graphics" to Enabled, the IGFX brings up BIOS screen, but at boot it gives this:

When I set both to Auto, GTX 760 gives picture, IGFX doesn't.

What could be the problem?
