## Ist das MSI H81M-E34 mit OS X Kompatibel?

**Beitrag von „osx2carly“ vom 25. Dezember 2015, 22:27**

Hallo einen schönen Weihnachts abend!

Habe das Tool System info mal laufen lassen, wollte euch Profis mal fragen ist OS X möglich auf dem Board?

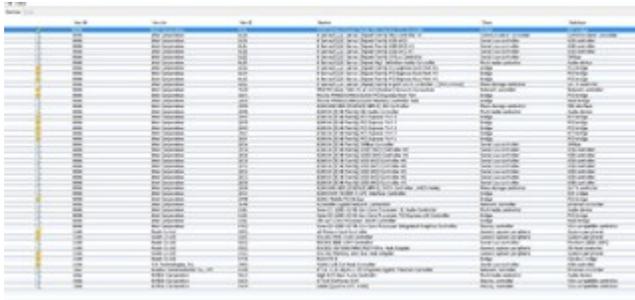

Prozessor: Intel Celeron G1840

Board: MSI H81M-E34

Grafik: Extern Zotac 210

8 Gb Ram

Danke Gruß Carly

The image is a screenshot of the System Information utility in macOS. It displays a table of system parameters organized into sections: Memory, Storage, Network, Graphics & Display, Sound, Power, and System. The 'System' section is expanded, showing details about the processor (Intel Celeron G1840), motherboard (MSI H81M-E34), and other system components. The 'Graphics & Display' section shows an external Zotac 210 graphics card. The 'Memory' section shows 8 GB of RAM. The 'Storage' section shows a single hard drive with a capacity of approximately 500 GB. The 'Network' section shows a single Ethernet adapter. The 'Sound' section shows a single audio device. The 'Power' section shows a single power source. The 'System' section shows the operating system version (OS X 10.11.2) and the system name (Mac-1234567890ABCDEF).
