[English] GA-Z97-HD3 with HD4600 can not boot

Beitrag von „thadeth“ vom 17. Januar 2016, 02:51

Greetings, I have spent many days on forums trying to find a solution to my problem... I hope someone can help me here.

I want to install El Capitan to my computer with the following specs:

GA-Z97-HD3 rev.2.0
i5-4460 with intel HD 4600
4GB RAM 1600 Mhz
250GB intel SSD (or ordinary HDD i can switch)

BIOS:

F6 Version.- Load the default settings

- Disable VT-d
- Set xHCI Auto mode
- Activate xHCI Hand-Off
- Activate EHCI Hand-Off
- Set the config. SATA AHCI

The problem is that I can not even boot into installation, I have tried combinations with boot flags `-x -v -maxmem=4096 nv_disable=1 IGPEabler=Yes ig-platform-id=0x0300220D` but always gets stucked (sometimes Kernel panic, sometimes still waiting for root device...)

I don't mind if Yosemite is possible to install to this configuration, I just need a stable PC on hackintosh to manage data and surf the net. Thank you
