[English] I need some help with El Capitan and Z77X-UD5H and Ozmosis. This is the best place, but I don't speak German. Can anyone help?

Beitrag von „colourofsound“ vom 18. Januar 2016, 10:05

The DSDT has worked! Now to install El Capitan. I shall report if I'm successful/.

Thank you so much once again!

EDIT: El Capitan works! The only issues I have now, which are both unimportant currently, is that my machine thinks its a Mac Pro 3,1 in some places and an iMac 14,1 in others. Are there a couple of places this system identifier is stored, and is there a way to get consistency?

Secondly, my bluetooth seems to have stopped working. This isn't that important to me though.

Thanks again!
