Erledigt USB 2.0 EL CAPITAN 10.11.3

Beitrag von „YogiBear" vom 10. Februar 2016, 23:53

Hello and !

Of cause you can write in English (or German), but most of us don't understand Portuguese (using an automatic translator will cause more problem than it will solve).

As far I can see you are running El Capitan on the hardware listet in your profile and the USB-2.0 ports aren't working? How was the installation done (guide)? Which KExts are you using? And: How does your dsdt.aml look like? Please attach the dsdt to your next - I assume the problem is related with it...

Btw: I moved your thread to the English section...
