Erledigt DSDT fix Z87MX-D3H (OZ167X)

Beitrag von „nikoZ" vom 27. Februar 2016, 13:40

Yeap, thanks to you most of the problems are gone. I also found [this](#).
I executed that command for proxysleep. As I remember my system doesn't wake up after two hours but I put system at sleep only when Im home. In the meantime I wake it up via WOL over Internet and static arp list on my home router, so that terminal command shouldn't affect WOL.
