Hier eine Möglichkeit da was zu machen:

Zitat

Generally, since nothing from standard OS X installs lives in /usr/local, it's okay to have it owned by your user.

So, you could just type:

Code

1. `sudo chown -R $(whoami) /usr/local`

Or if you want it specific to /usr/local/bin:

Code

1. `sudo chown -R $(whoami) /usr/local/bin`

Also, your permission modes are off—ideally /usr/local/bin should be accessible by others too:

Code

1. `sudo chmod -R 755 /usr/local/bin`
