Osmosis für FileVault 2 ?

Beitrag von „43n79w“ vom 3. März 2016, 04:39

[Zitat von Senseye](#)

Insert the 2 files attached here by Download-Fritz into your Bios and try again.

OK. I discovered that if I plugged a USB mouse into my wired Apple keyboard, that I was able to type into the password field. However, it was very unstable and I could not enter my password.

So I added those 2 .ffs into my BIOS, flashed the updated firmware and things are a little better in that I can type into the password field. However, I can't type one character that I need (it is the slash / character). It seems like I can only type lowercase letters, numbers, and a few extra symbols. Without being able to type the slash character and use the shift key for uppercase letters, I can't seem to login 😞

Any idea what else I can try?
