Osmosis für FileVault 2 ?

Beitrag von „43n79w“ vom 3. März 2016, 17:38

Unfortunately I tried that. I should have mentioned it. But it didn't work either. I am in Canada so I believe my keyboard is an American one. The slash key is directly to the left of the Shift key and doesn't require shift to be entered.

I can get into the Recovery partition and mount the volume just fine there. I tried to reset my password through Recovery and that worked, but it didn't change the password needed to mount the Filevault volume. So I think I am out of options. I have backups, but I was hoping not to have to resort to a full restore.
