can't load kext com.apple.iokit.IOBluetooth Couldn't alloc class "AppleTyMCEDriver on El- Capitan Clover

Beitrag von „YogiBear“ vom 16. März 2016, 12:44

Hello and 🙋 !

Let me guess... you are using the SMBIOS definition of a MacPro6,1? This machine uses ECC-RAM and loads the AppleTinyMCE.kext for it. You can fix the problem by deleting the AppleTinyMCE.kext or changing the SMBIOS to MacPro3,1 or iMac11,3.

PS: I moved your thread to English section of our board
