AppleALC is working fine for me in S/L/E, BUT:  
could you please explain howto use AppleALC in Ozmosis Bios (or EFI partition)?  
FredWst remarks on insanelymac weren't quite helpful:

Zitat

Kext2Ffs does'nt convert Kext with plugins inside.  
You must copy PinConfigurator.kext, remove directory plugin from AppleALC.  
Put both into Kext2Ffs kext directory.  
And it should work.  
Fred
