Suche: AppleHDA (v274.7) gepacht für RealtecALC1150 - GA-Z97X-UD3H

Beitrag von „unexpected_eof“ vom 29. März 2016, 10:40

Yes, it is the same -although there are a couple of different versions flying around ...

My current (working) setup uses FakeSMC in BIOS and a stripped AppleALC in /EFI/OZ/Darwin/Extensions/Common.

To my surprise a separate PinConfigs.kext prevented a reboot - so i deleted it.
