Erledigt **{Diskussion} Z97X-UD3H, i7 4790k, GTX 970, SoundBlaster SB1040, BCM94360CD, El Capitan USB FIX**

Beitrag von „uiop" vom 6. April 2016, 11:00

Hi

I followed the guide:

I patched DSDT pjalm, then toleda HDMI, and everything.

Then I created ozmosis bios, integrating all the necessary kexts and all is working...

Except the computer does not shutdown completely... The OSX goes off, but the computer lights

are still on and the fans are still working, and the USB connected devices are still charging.

To shut it down I have to hold the power button to power it down completely.

Anyone else having this problem?
