[@uiop](#)

Nice to to know that it might work, putting all the necessary, but not original Kexts directly into the Ozmosis-ROM.

Did you ever think about the time, when you need newer version of those kexts?

Would you try to inject them into the ROM again?

Leaving those kexts in the EFI-Partition for quick changes seems to be the more flexible way...

Regarding your sleep issue:

Check out the source of your problem, by using the commands

Code

1. `pmset -g assertions 0 no sleep issues 1`

and

Code

1. `pmset -g`

You might need another patch in your DSDT or you have to check the [BIOS settings](#) for the Wake on LAN function.

Be careful, the option might also be able to be controlled in "Peripherals" sub menu "Intel Ethernet Network Connection i217-V"....
