Do you use a DSDT with your System?

OK, now everything is working (so far). 

I used a patched dsdt from steff89, I changed EH01 and EH02 back to EHC1 and EHC2, and patched dsdt with toleda patch for Audio layout 1 on [github.com/toleda/audio\\_realtekALC](https://github.com/toleda/audio_realtekALC) and added ssdt for my processor. I then added driver kexts (FakePCIID\_XHCIMux.kext, FakePCIID.kext, AppleIntelE1000e.kext) into bios... So everything is integrated in bios :))

Its really quick to update bios if you have a pre-made commands so when you change any of the files you just run the command and flash the newly created bios.

Thank you for your help. / Vielen dank
