## Skylake Sammelthread (Hilfe und Diskussionen)

**Beitrag von „weppingpresent“ vom 25. April 2016, 03:44**

Hello everyone ! I am new to this forum and to hackintoshing

Ozmosis seems the way to go for a clean hackintosh, however I have troubles finding compatibility with intel newest chipsets for skylake cpus

I tried google translating several threads on this topic but my lack of knowledge and the poor translation lead me to very obscure answers

So if anyone could update me on this subject it would be very much appreciated 😊

I plan buying the GA-Z170N-Gaming 5 mobo for a new build but I want check compatibility first

Thanks !
