The configuration of my cpu is :

Intel Core I5 3470
Motherboard : Motherboard Gigabyet Ga B75m - d3h 1155
Video Board Evga Geforce GT640 2gb

I installed the system on my HD , and it worked normal in another computer I tested , but in my machine it does not work , it just starts up the part that displays a gray screen with the gray Apple and a progress circle spinning, and does not continue more. It is with the progress turning and does nothing ... HELP[/color]
