

## Erledigt **Anmelde- und Druckerprobleme**

Beitrag von „al6042“ vom 6. Juni 2016, 23:21

Mit dem Zauberstab arbeite ich schon die ganze Zeit, aber ich nutze auch die beiden "Shake" Schalter jeweils mehrmals, um eine nicht "ausgelutschte" Seriennummer zu generieren:

The screenshot shows the SMBIOS configuration utility for an iMac14,2. The interface is divided into two main sections. The left section contains fields for Product Name (iMac14,2), Family (iMac), Manufacturer (Apple Inc.), Board ID (Mac-27AD0887B4CEE8E61), Bios Version (iMac14,2.88Z.0118.000.1309031249), Bios Date (09/03/2013), Bios Vendor (Apple Inc.), and System Version (1.0). The right section contains fields for Model Number (iMac14,2), Manufacturer Location (OK, Ireland (Cork, Ireland)), Year of Manufacturer (2013), Week of Manufacturer (34), and Unit Number (59N). The 'Week of Manufacturer' and 'Unit Number' fields are highlighted with a green box, and 'shake' buttons are visible next to them. Below these fields is a 'Serial Generator' section with a 'Serial' field containing the value 'C02LL59NFBJC'. At the bottom of the utility are 'OK' and 'Close' buttons.
