HDMI vs DP

Beitrag von „locus“ vom 11. Juni 2016, 20:44

Hi

I am using Ozmosis and got t working like I want it.

Except the monitor only works through the HDMI and that is 3840x2160 at 30Hz on a Dell P2715Q.

If I switch to the latest Clover I can and want to use Displayport which can drive 3840x2160 at 60Hz.

As soon as I try to use DP through Ozmosis the screen just go black, no crash or reboot, just black. To me it seems loss of signal.

Anybody a suggestion?
