AppleALC works just fine in /S/L/E in 10.12 according to the tests.<https://applelife.ru/threads/applealc-dinamicheskij-patching-applehda.1171672/page-157#post-596015>Since kext injection is half broken in Clover at the moment I may imagine issues when loading from EFI partition but even that is unlikely. Any further report without providing debug logs will be ignored.
