

# AMD RX 490 und RX 480

Beitrag von „rubenszy“ vom 29. Juni 2016, 16:33

Zitat

amd drivers has new amd9500Controller.kext which is for polaris gpu (0x67E01002 0x67FF1002 0x67C01002 0x67DF1002)

amdRadeonX4000.kext has new graphics accelerator - AMDBaffinGraphicsAccelerator (Polaris 11) (0x67E01002 0x67FF1002 0x67EF1002)

still no fiji accele support, Polaris 10 only framebuffer support, Polaris 11 has full support - apple is working on some new macs with Polaris 11 included, AMD today announced new cards as well, RX460 (P11 based), RX470/RX480 (P10 based)

Alles anzeigen

Das lustige dabei ist das die R9 Fury/X/Nano damit funktionieren

Für die R9 Fury X die 0x73001002 unter  
/System/Library/Extensions/AMDRadeonX4000.kext/Contents/Info.plist  
AMDBaffinGraphicsAccelerator/IOPCIMatch eintragen und schon läuft die Karte.
