USB-Bluetooth-Stick für Handoff

Beitrag von „PandaX“ vom 13. Juli 2016, 22:19

Hab schon die neuste Version.

Ne, scheint wohl nicht zu funktionieren.

Hab mal nachgeguckt, der Entwickler hat wohl auch geschrieben, dass Atheros-Karten nicht gehen, obwohl AirPort anscheinend doch funktioniert:

Zitat

@nyrob94 That's correct, as stated on the homepage and in your System Diagnostic output, the Atheros Wi-Fi hardware in your iMac doesn't support Continuity. A BT4.0 USB dongle won't make Continuity work with your iMac, an AirPort card upgrade is required.

Line to look for in your System Diagnostic output:

Verifying Wi-Fi hardware... NOT OK. An Atheros AirPort card is used. An upgrade to a Broadcom one is required to make Continuity work.

Homepage warning:

Atheros Wi-Fi AirPort cards will prevent Continuity from working even when adding a Bluetooth 4.0 dongle. The System Diagnostic feature of CAT tells which Wi-Fi brand is active. There are no workarounds and no patch is expected to change this, an AirPort card upgrade is required.
