Hersteller: MSI

Modell: Z87 G43 Gaming.

Chipsatz: Z87

Bios Version: A.7

Bios Link: [http://download.msi.com/bos\\_exe/7816vA7.zip](http://download.msi.com/bos_exe/7816vA7.zip)

Tried with the A6 (1669m and 167x version) found in this forum and a modified version by griven but every time system reboot or stuck on apple logo ..

A question : When i update bios i can choose with a normal update and a update of BIOS + ME .. What is the correct?

EDIT reflashed with option BIOS+ME and same results.. stuck on apple screen or reboot.

will try with new bios updated
