Erledigt Problem MSI Z87 G43 Gaming

Beitrag von „al6042" vom 27. August 2016, 12:36

If your Audio Output is on HDMI, the volume Control must be done by the HDMI-Device, OSX can't do that for you.
If you switch to one of the analog devices, like "internal speakers" or "headphones" (if connected) the volume should be manageable...
