OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „fredsky“ vom 13. September 2016, 04:16

hallo zusammen

(ich bin franzosich, sprechen nur ein bisschen deutsch...)

a "guest" posted on this forum a nice ozmosis mod for my mother board GA-Z68MA-D2H-B3 (i know a old but gold board), with ozmosis 1479.

i spend many time, and now yosemite is up and running. i wrote a full FAQ/repport about this.

now i need the mod bios for new ozmosis 167x-mass, but even if i tried many times with MMtool v4, i can not insert the minimum FFS file, not enough space. even deleting the FFS from the already moded 1479 bios, and then insert newest version from 167x doesn't work...

can somebody help? 😊

danke sehr,
fred
