Apple modified again FairPlay DRM and by implementation of AirPlay function in Safari it causes a lot of freezes.

New workaround posted [here](#) by vit9696. Along with a new kext version in his [repo](#).

Im currently running only HD4600 which gives me freezes when i play something in Dailymotion for example. I didn't managed it to make it work. If someone can do a bit more digging it will be awesome.

Thanks.
