Kein Bild mit GTX 660 und GM Sierra

Beitrag von „kzverev“ vom 7. Oktober 2016, 15:34

Thank for your reply given. I fix sound with [https://www.hackintosh-forum.d...age=Thread&threadID=14502](https://www.hackintosh-forum.de...age=Thread&threadID=14502) file. I install it and sound just works. I can't enter BIOS setup it's freeze when I pres del. But long press ALT works I can chose boot device. I think it's OK what BIOS setup not boot. I try flash [Mod Für das Z87X-UD5H Rev.1.x](#). On these rom I can enter bios setup and make some chenges. But I have too some situation. It's freeze on boot with GTX660TI in intel HD4600 works prefect. I install latest Nvidia web driver and try to boot it not working. I think I need turn off HD4600 and turn ON GTX660TI somewhere in OZM settings but I dont know how.
