## OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „wiliam.ding“ vom 27. Oktober 2016, 10:26

[Zitat von al6042](#)

To add boot-args in Ozmosis please read the following post, containing a kind of manual for Ozmosis-Settings:

[Version 1479m](#)

Where did you put the DSDT.aml?  
Which directory?

I know how to add boot-args, and I've done this. But the problem is the boot-arg is no longer working in the new OS macOS Sierra (10.12), I mean that Clover has given up this boot-arg because it won't work anymore and they use the new NvidiaWebdriver function to load the webdriver. But Ozmosis seems not to support NvidiaWebdriver=true.
