OZMOSIS REQUEST THREAD / Ozmosis Anfragen [1. Beitrag beachten!]

Beitrag von „griven“ vom 27. Oktober 2016, 21:04

[@Zhaman](#) there is no way to increase the boot screen resolution since it isn't affected by Ozmosis in anyway. Having native Solution in the boot screen is mostly a matter of having an UEFI GOP compliant Video Bios or not. In the process of initialisation the computer reads out all supported video Modes from the Video Bios and applies the most suitable one. If there is no UEFI GOP Video Bios present or if video Mode is set to CSM then only VESA Modes will be available in this stage of boot which means highest possible resolution will be set to something like 1024*768px pretty far away from HD 😄

You can try to disable CSM Mode in Bios and see if this does the trick if not you can also try to replace your stock CSMVideoDXE (inside the ROM) with a patched version provided from HermitCrabLabs (it's inside the original QUO AOS Bios Files).
