Erledigt Ozmosis for z77mxquoaos?

Beitrag von „heideana" vom 1. November 2016, 19:45

Much thanks to you both! I installed the non-sierra version and only problem seems to be my ID/can't access App Store/iCloud and HDMI sound out to monitor which is great!!!!

I have another question which hopefully is just a quick one...I placed the Defaults13,2.plist in the EFI Oz directory and think I need to do a PRAM NVRAM reset to load it? One the other hand, I don't want to mess my installationn up either...

Best/thanks...Hopkins
