ha sorry! i haven't gotten a chance to test it yet. i already have a DSDT that i use, but i wanted to look through the one you made to compare it to see how well I did with mine. my only issue is that it's a z97 and doesn't have writable NVRAM, so ive been looking into patching the modules that control that (SbSmi.ffs and NvramSmi.ffs etc).

I will report back after i get a chance to test a few things. I really appreciate you taking the time to do this for me!
