Atheros AR9285 on Acer Aspire E1-571?

Beitrag von „al6042“ vom 13. Dezember 2016, 19:56

Hi Nathan,

the AR9285 should work fine with the AirPortAtheros40.kext, which is already in your OSX Installation.

I guess you just need a DSDT-Patch like the one in the following Spoiler:

Spoiler anzeigen

THis will inject the necessary device infos, without using the AtherosWifInjector.kext...;)
