

Erledigt

Die flotte Kiste und das M.2 NVMe SSD-Problem

Beitrag von „Noir0SX“ vom 26. Dezember 2016, 10:27

Zitat

If you are trying to use HackrNVMeFamily for the 10.12 installer, forget about it. Use the correct patches in config.plist KextsToPatch.

Once you install, you can create the HackrNVMeFamily and use it (or use one you already created), but you must remove IONVMeFamily.kext from /System/Library/Extensions
