

VIA VT2020/2021 (Z77X-D3H) mit DSDT Patch

Beitrag von „SonicBSV“ vom 15. Januar 2017, 17:57

MacPeet, can make a manual shift mode as you suggest above.....also you can display the microphone on the rear panel and remove the front

Perhaps the sensitivity of the microphone will be better.....but that's my guess
About the problem autodetect on desktops I know....sometimes crashes like you say...but overall it works

p.s. viewed me patched kexts in network ..I have only seen the same inappropriate location
ampthat in General is bad for sound and other problems
