@kaim
An internal USB Device, that's why I didn't see it... sorry, but this project is about internal PCIe cardreaders. Building a universal USB/PCIe driver might work, but would be complicated and really impractical, since it would increase boot/load times and so on.

I'd really appreciate if you can contribute to a testing device. Maybe someone else from the community wants to contribute as well. There is just one more thing to think about. Since I want this project to be a solution for most devices (which are commonly PCIe based) I have to decide which way to go (and therefore which device to buy). I would still prefer the PCIe way, but that wouldn't be of any help for you. And also if you get a device for me I can't promise that I will succeed, so really think about it.

In AppleStorageDrivers.kext is the old AppleUSBCardReader.kext Plugin. Unfortunately it is closed-source, but we could mess around with the Info.plist and some binary patching, before starting another SDXC-USB-Kext project. Please open another thread in "Nach der Installation" - "Kexte / Bootloader / DSDT" where we can talk about it. Again give some information about your device, upload your IOReg and tell, what you tried so far, so others can watch the progress and contribute.

Greetings to Israel

@keiner99 danke, ich nehme ihn mir gleich😉   Auch wenn der Leser dort dem Apple Treiber bekannt ist lässt sich sicher ein wenig Treiber basteln üben.
