

# AMD RX 490 und RX 480

Beitrag von „sev7en“ vom 3. Februar 2017, 17:16

Thanks to all that, I got the RX480 and I am trying to make it at work via EGPU but till now I have anytime that error..

```
sh-3.2# ./automate-eGPU.sh
```

```
*** automate-eGPU.sh v0.9.9 - (c) 2016 by Goalque ***

Error Reading File: /System/Library/Extensions/AMDRadeonX4000.kext/Contents/Info.plist

SetIOPCIMatch() appended device ID 0x67df1002 in  
/System/Library/Extensions/AMDRadeonX4000.kext/Contents/Info.plist

IOPCITunnelCompatible mods done.

All ready. Please restart the Mac.

sh-3.2#

Someone can help me?

It is what I read for my PCIe GPU:

Device ID: 0x67df

Revision ID: 0x00c7
