

AMD RX 490 und RX 480

Beitrag von „Fredde2209“ vom 4. Februar 2017, 10:39

For an RX470/480 Card, you only need the original AMD kexts. Then you execute this command in Terminal:

Code

```
1. sudo sed -i "" 's/0x67E01002/0x67DF1002/g'  
   /System/Library/Extensions/AMDRadeonX4100.kext/Contents/Info.plist
```

Repair caches etc. using Kext Utility, set iGPU to primary in Bios and start macOS. Nothing more than that.
