Yes it should, because it only needs a different GPU, not a supported GPU. So, the HD630 boots until the graphics initialisation has finished and then it swaps to the output of the RX480. The only problem is, that you can't get any picture on the HD630 display, I recommend using a VGA cable on the internal graphics and a Display Port or HDMI cable on the dedicated AMD graphics card. This way, you only need to change the input from VGA to DP/HDMI and you don't waste a full monitor only for booting.
