[v7xR1] - ASUS ROG Maximus IX Formula + i7-7700K + RX480... my next MacPro!

Beitrag von „kuckkuck“ vom 4. Februar 2017, 11:49

Do it all separate.

First of all install MacOS on one of your drives. When everything's up and running disconnect the MacOS drive.

Afterwards connect a new drive and install Windows on it. After that's done...

...proceed to installing Linux on another drive after disconnecting all the other harddrives.

At the point in time when each OS is set up, connect all drives to your computer and you're going to have a triple boot system 😊
