iTunes 12.5.5 lässt sich nicht mehr öffnen

Beitrag von „chironex“ vom 6. Februar 2017, 06:09

Zu

Dispatch queue: com.apple.FigASMF.InstanceManagement

habe ich nachstehendes gefunden. Ich hoffe es hilft 👍 :

<https://discussions.apple.com/.../25481987#message25481987>

Back up all data.

Triple-click anywhere in the line below on this page to select it:

~/Library/Containers/com.apple.BKAgentServiceRight-click or control-click the line and select

Services ▸ Reveal in Finder (or just Reveal)

from the contextual menu. A folder should open with an item selected. Move the selected item to the Trash. Log out or restart the computer and test.*

**If you don't see the contextual menu item, copy the selected text to the Clipboard by pressing the key combination command-C. In the Finder, select*

Go ▸ Go to Folder...

from the menu bar and paste into the box that opens by pressing command-V. You won't see what you pasted because a line break is included. Press return.
